Setting a new horizon for PFAS workflow solutions

The detection and quantification of known PFAS and the discovery of unknown PFAS has never been more important. Determining the best workflow for your PFAS analysis can be challenging. Optimal methods will vary depending on the matrix you are working with and goals of your analysis. There are strategies to help you with either targeted analysis of known PFAS compounds or the discovery of unknowns, from a variety of matrices.

Whether you need just a single item to complete an analysis or everything from sample preparation to chromatography and mass spectrometry to data analysis software, we have you covered. We offer solutions for problems at any step of your analytical process, no matter the size or scope of your PFAS project.

Minimize risks of contamination with consumables

Due to the increased use of PFAS, there are many different risks of contamination to the analysis. Care must be taken during sample preparation, sample handling and analysis, particularly as detection limits are in the low to sub-ppt range. It is not only recommended to ensure risks of contamination is minimized in the laboratory but also with your chromatography solution. You can minimize the risk of contamination to your chromatographic equipment by using our PFAS kit (includes PFAS-free tubing, fittings), solvent filter inlets and our isolator column. Changing the tubing and using an isolator column as part of the solution, to separate out the analytical PFAS from the system PFAS, will result in more accurate quantitation.

PFAS columns overview

Isolator columns

The use of an isolator column is necessary when analysing PFAS, as it helps to separate background contaminants from sample analytes, allowing for a more accurate sample result. For this we recommend Thermo Scientific™ Accucore™ C18 column.

Analytical columns

For high retentivity and large volume direct injections a fully porous column such as Thermo Scientific™ Acclaim™ C18 column has excellent peak shape for PFAS analyses. A fully porous column with larger surface volume has more stationary phase to appropriately separate the analytes. For methods where smaller sample injection volumes are employed, Accucore RP-MS column is recommended. The Accucore column is a solid-core that provides excellent chromatographic separation and maintains robustness in challenging water matrices.

Guard columns

Use a guard column to prolong the lifetime of your analytical column. A guard column is a protective column installed between the injector and the analytical column. It serves to remove the impurities, particulate contaminants, suspended solids and highly absorptive compounds from samples from reaching the analytical column. Read more about prolonging the lifetime of analytical column [here](#). The Acclaim and Accucore guard columns are used for PFAS within the industry.

GC columns

For neutral (or volatile) PFAS, such as fluorotelomer alcohols (FTOHs), N-substituted fluoroalkylsulfonamides (FOSAs), the trifluoropropylmethyl polysiloxane mid-polarity phase of Thermo Scientific™ TraceGOLD™ TG-200MS provides a unique selectivity for fluorinated compounds for an adequate chromatographic separation of the targets combined with Gaussian peak shapes. Additionally, it also showed excellent peak shapes for ionic perfluoroalkylcarboxylic acids (PFCAs) and fluorotelomer carboxylic acids (FTCAs). The low polarity, arylene content of TraceGOLD TG-5SiIMS phase improves thermal stability and provides the lowest bleed, making it ideal for screening and unknown identification.

Sample handling solutions

PFAS sample handling solutions overview

Vials, caps, well plates and mats

To assure a robust method with accurate results use an absolute halogen free polypropylene vial or well plate, especially for the analysis of low concentrations of PFAS.

Caps and septa

To assure no contamination or background corruption for PFAS analysis, we have more than one recommended closure. You are able to use one piece polypropylene snap ring caps or polypropylene 9 mm screw thread caps with a thinned penetration area. When resealing for multiple injections is important, we offer snap ring and screw thread caps with a silicone/polyimide septum for trouble free analysis.

SureSTART vials and caps shown below are in 100 pack, but are also available in 5,000 and 10,000 pack options.
